

CPx Coverage and dilution:

For standard Seattle Parks Trail Mix

Product required:

Trail mix depth: sq ft/gal

Trail Mix Depth		sq ft/gal	
4	inches	36	sq ft/gal
3	inches	49	sq ft/gal
2	inches	64	sq ft/gal

Remember, the water is just the carrier of the product. Calculate the product first.

Example: so for an 8ft x 8ft patch you would need 1 gallon of stabilizer.

DILUTION depends upon conditions.

- a. Start with a little test of 8 parts water to one part Stabilizer. so in the example above: 1 gal CPx, 8 gal water
- b. For cooler weather, use less water, for really hot may use a little more - up to 10:1 so the material stays moist until rolled.
